

# Key Information Document (Investment option information)

## Purpose

This document should be read alongside the HSBC Onshore Investment Bond Key Information Document and provides you with specific information about this investment option (fund).

## Investment

<b>Name of investment:</b>	Schroder Managed Balanced Fund I Accumulation	<b>Asset manager:</b>	Schroder Unit Trusts Limited
<b>ISIN:</b>	GB0002899846	<b>Published Date:</b>	29.02.2020

## What is this investment?

### Type

This is an investment fund.

### Intended retail investor

The fund is intended for retail and institutional investors.

### Objective

The fund aims to provide capital growth and income. The fund invests in other funds, which themselves invest in shares and bonds and/or money market instruments traded world-wide. This fund is aimed at investors looking for a flexible product that accesses a broad range of assets and financial markets. The fund seeks to generate attractive returns over the long-term by blending a diversified selection of funds managed by Schroders and other investment managers. This 'fund of funds' approach allows us to tap into a blend of investment ideas across the industry. The portfolio balances an exposure to higher risk / higher growth assets like equities with lower risk assets like bonds. Allocation to asset classes and regions will be adjusted according to Schroders' Multi-Asset Team's views on the economy and markets in order to enhance returns for investors. Allocation to the underlying managers will change based on in-depth fund research carried out within the team. The fund may also invest directly in shares and bonds (with a bias to the UK market), money market instruments and hold cash on deposit. The fund may gain exposure to alternative asset classes, including, but not limited to, real estate, commodities, hedge funds and private equity. The fund may also invest in other financial instruments and hold cash on deposit. Derivatives may be used to achieve the investment objective and to reduce risk or manage the fund more effectively. The fund is valued with reference to the net asset value of the underlying assets.

## What are the risks and what could I get in return?

### Risk Indicator

Lower risk 

1	2	3	4	5	6	7
---	---	---	---	---	---	---

 Higher risk

**The risk indicator assumes that you keep the investment for 5 years.**

The recommended holding period for the Onshore Investment Bond (OIB) is at least 5 years. The recommended holding period of this investment is 3 years. Other investments you can hold within the OIB may have longer or shorter recommended holding periods. In order to provide a consistent comparison of the risk performance and costs of the different investments, the recommended holding period of the OIB has been used for the calculations in this document.

The summary risk indicator is a guide to the level of risk of this investments compared to other investments. It shows how likely it is that this investment will lose money because of movements in the markets or because Schroder Unit Trusts Limited is not able to pay you.

We have classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the capacity of the PRIIPs manufacturer to pay you.

Other risks materially relevant to the PRIIP not included in the summary risk indicator: You can find more information about the other risks in the prospectus at: <http://www.schroders.com/getfunddocument?oid=1.9.1510>

This investment does not include any protection from future market performance so you could lose some or all of your investment.

Market developments in the future cannot be accurately predicted. The scenarios shown are only an indication of some of the possible outcomes based on recent returns. Actual returns could be lower.

### Performance scenarios

Investment £ 10,000		1 year	3 years	5 years (Recommended holding period)
<b>Survival scenario</b>				
<b>Stress scenario</b>	<b>What you might get back after costs</b>	£ 8,467.71	£ 7,456.68	£ 6,811.41
	Average return each year	-15.32 %	-9.32 %	-7.39 %
<b>Unfavourable scenario</b>	<b>What you might get back after costs</b>	£ 9,594.21	£ 9,989.03	£ 10,632.35
	Average return each year	-4.06 %	-0.04 %	1.23 %
<b>Moderate scenario</b>	<b>What you might get back after costs</b>	£ 10,576.23	£ 11,820.29	£ 13,210.69
	Average return each year	5.76 %	5.73 %	5.73 %
<b>Favourable scenario</b>	<b>What you might get back after costs</b>	£ 11,642.71	£ 13,968.01	£ 16,391.67
	Average return each year	16.43 %	11.78 %	10.39 %
<b>Death scenario</b>				
<b>Insured event</b>	<b>What you might get back after costs</b>	£ 10,586.81	£ 11,832.11	£ 13,223.90

This table shows the money you could get back over the next 5 years, under different scenarios, assuming that you invest £ 10,000.

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products.

The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment.

The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where Schroder Unit Trusts Limited are not able to pay you.

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

## What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs.

The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest £10,000. The figures are estimates and may change in the future.

### Costs over time

Investment £ 10,000 Scenarios	If you cash in after 1 year	If you cash in after 3 years	If you cash in after 5 years
<b>Total costs</b>	£ 74.63	£ 251.99	£ 472.71
<b>Impact on return (RIY) per year</b>	0.75 %	0.75 %	0.75 %

The person selling you or advising you about this investment may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

### Composition of costs

The table below shows:

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- The meaning of the different cost categories

This table shows the impact on return per year			
<b>One-off costs</b>	<b>Entry costs</b>	0.00 %	The impact of the costs you pay when entering your investment.
	<b>Exit costs</b>	0.00 %	The impact of the costs of exiting your investment when it matures.
<b>Ongoing costs</b>	<b>Portfolio transaction costs</b>	0.22 %	The impact of the costs of us buying and selling underlying investments for the product.
	<b>Other ongoing costs</b>	0.53 %	The impact of the costs that we take each year for managing your investments and other recurring costs.

Occasionally, the portfolio transaction costs shown could be negative. This happens when the investment manager has been able to buy investments at a rate lower than the market rate. The benefit of such a discount will be reflected in the costs and projected figures shown in this document.
